PROFILE

Backend-focused Software Engineer with experience designing and owning high-availability, scalable backend systems processing **130M+ records daily** with **99.9% SLA**. Strong foundation in Data Structures & Algorithms, Object-Oriented Design, LLD, and building production-grade APIs. Proven ownership of mission-critical systems, shared internal libraries, and cloud-native deployments.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend & APIs: FastAPI, Flask, REST APIs, JWT, Microservices, Async Processing

Databases & Data Platforms: PostgreSQL, Snowflake, Databricks, Apache Airflow

Cloud & DevOps: AWS (S3, Lambda, ECS), Docker, CI/CD

Core CS: Data Structures & Algorithms, OOP, SOLID, Low-Level Design

Certifications: AWS Certified Developer - Associate

EXPERIENCE

Software Engineer

Cimpress India

Aug 2024 – Present

Bangalore, India

- Owned end-to-end Google Ads (**80M records/day**) and Bing Ads (**50M records/day**) ingestion pipelines with **99.9% SLA**; replaced Fivetran, eliminating **\$30K annual SaaS spend** through independent system design and deployment.
- Designed and maintained a shared internal **Python SDK** abstracting Snowflake, Databricks, Airflow, and Akeyless access; owned adoption across teams and reviewed extensions by senior engineers.
- Built and deployed a production-grade **FastAPI service** with JWT authentication, CORS policies, and **100% test coverage** using pytest and dependency mocking; owned CI/CD and multi-environment rollout.
- Architected resilient data pipelines with parallel execution, exponential backoff retries, schema validation (Great Expectations), and intelligent alerting to ensure correctness across **130M+ daily records** against external API failures and schema changes.
- Created Spark-based batched ingestion to Snowflake, reducing cluster size and compute cost while meeting end-to-end SLA through cost-latency tradeoff analysis.
- Contributed to **RFC-9** defining org-wide cost attribution across products and business units, enabling improved visibility into Snowflake, Databricks, and compute usage.

Software Engineer Intern

Cimpress India

Feb 2024 – Jul 2024

Bangalore, India

- Developed a Flask-based REST API for marketing budget automation; integrated Snowflake for state persistence and Akeyless for secure credential lifecycle management.
- Contributed to a mid-stage product backend, focusing on maintainable API design, code reviews, and adherence to internal engineering standards.

PROJECTS

SummarizeIt

Python, Flask, REST APIs, HTML/CSS, JavaScript

- Built a backend-driven web application providing AI-powered, multilingual summaries for YouTube videos and audio content.
- Designed REST APIs for ingestion and processing; integrated OpenAI Whisper for transcription and GPT-3.5 for text summarization.

EDUCATION

CMR Institute of Technology

Bachelor of Engineering in Information Science

Sept 2020 – May 2024

Bangalore, India
