

I'm Sumanth,

I've always wanted to work closely with startups. The pace, ownership, and learning curve that come with building in a small team are exactly what I'm looking for at this stage of my career.

I'm a flexible developer who enjoys figuring things out and taking complete ownership of the products I work on. I may not know everything upfront, but I'm confident in my ability to solve problems quickly and build reliable systems end-to-end.

At Cimpres, I rebuilt a \$30,000/year data pipeline tool from scratch, adding retry logic, schema validation, parallel execution, and monitoring for upstream API changes. Today, it processes 130 million records daily at 99.9% SLA with minimal maintenance.

I also maintain a shared internal SDK used by other engineers, which taught me the importance of building reliable, scalable systems that work seamlessly for teams under real-world pressure.
